

Duke

A New Concept for Comfort

Duke

A New Concept for Comfort

Main Features

1. Active Back Structure

2. Smart Operation

3. Superior Material

Duke

A New Concept for Comfort

Active Back Structure

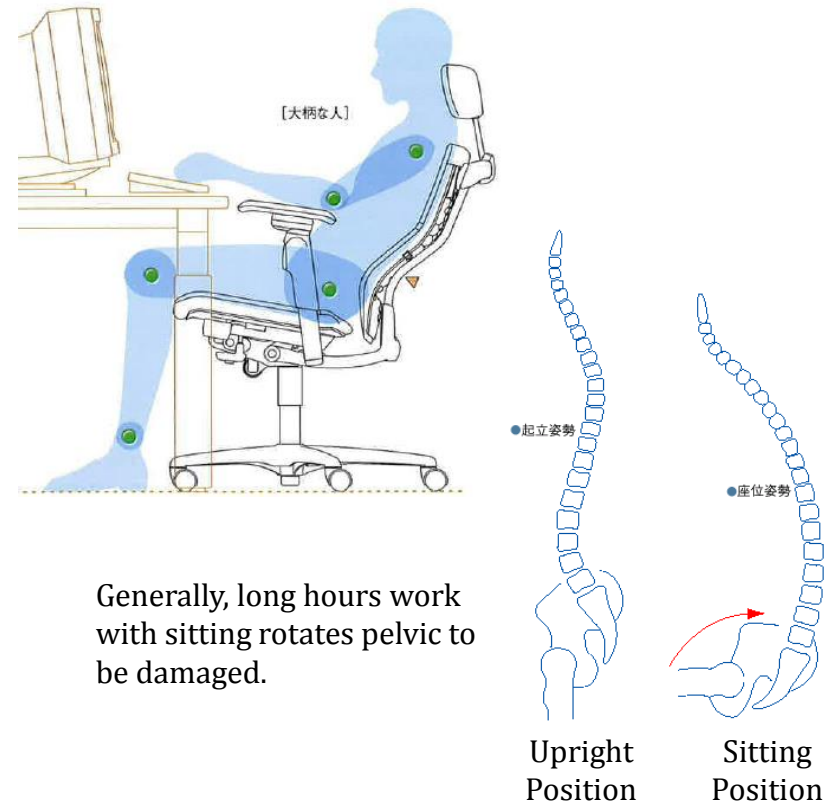

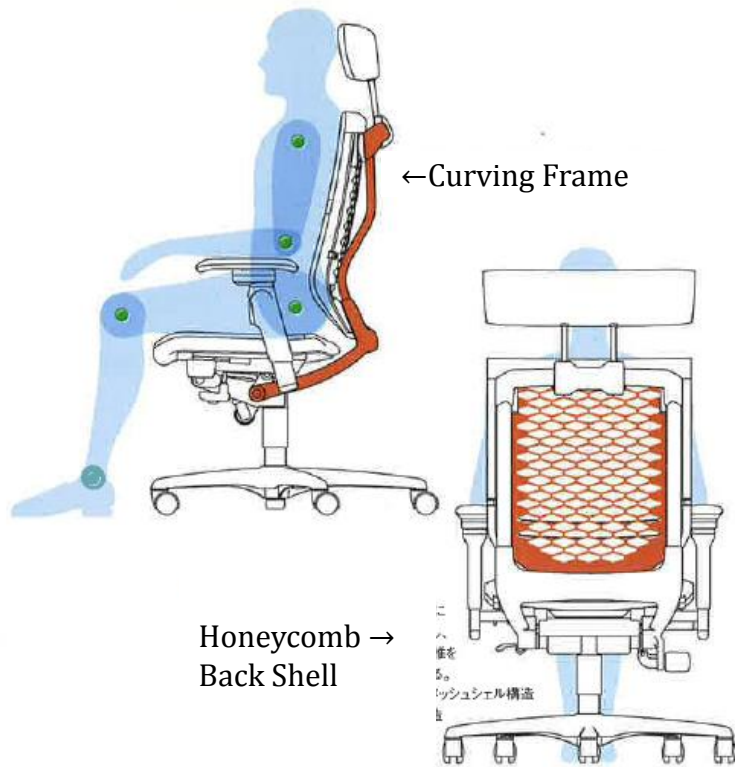

Three layers of flexible back support

- Molded urethane cushions
- Honeycomb-designed resin shell
- Aluminum Frame

They bring the backrest to be always snug and comfortable and to provide a level of comfort unlike any other seating.

Mechanism of Active Back Structure

Generally, long hours work with sitting rotates pelvic to be damaged.

The distinctive shape of curving frame remains the S-curve of user's spine. In the meantime, the honeycomb-shaped shell fully supports the backrest.

This unique mechanism can hold the spine as natural shape to minimize the fatigue by long-hours work.
